1. Preamendments filed 12/14/00 and 3/8/01 have been considered and entered. Claims 1-8 remain in the application.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1,2 and 5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1 and 2 provide for the use of a plating catalyst, but, since the claims do not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claims 1 and 2 are is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

The Examiner suggests deleting these claims as subsequent claims recite the required steps necessary to perform the process.

Art Unit: 1762

With respect to claim 5, the claim is confusing. It is unclear as to how the claimed removal and applying step can be performed at the same time. In addition, the claim depends from claims which recite steps "in order" which denotes "non-simultaneous steps". Clarification is requested.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted state of the art (pgs. 1-4) in combination with either Kawagishi et al. (4,940,608) or Grosclaude (5,388,754) or Kanoh et al. (5,989,787).

Applicant's admitted state of the art (pgs. 1-4) teaches selective coating of substrates including the steps of roughening, masking, catalyst, plating and removing the mask and catalyst. The sequence of steps can vary to achieve the desired coating pattern.

Applicant's admitted state of the art (pgs. 1-4) fails to teach a masking coating which is water soluble or hydrolyzable.

Art Unit: 1762

Kawagishi et al. (4,940,608) or Grosclaude (5,388,754) or Kanoh et al. (5,989,787) all teach masking coating which are hydrolyzable and can be removed by water or a solution including water.

Therefore, it would have been obvious for one skilled in the art at the time the invention was made to have modified Applicant's admitted state of the art (pgs. 1-4) process by substituting a water soluble or hydrolysable masking coating as evidenced by Kawagishi et al. (4,940,608) or Grosclaude (5,388,754) or Kanoh et al. (5,989,787) because of the advantages associated with their use, i.e. ease of removal, less contamination, less potential damage to substrate, etc.
